Agenda

- Android Anatomy
 - Linux Kernel
 - Native Libraries
 - Android Runtime
 - Application Framework
- Android Physiology
 - Start-up Walkthrough
 - Layer Interaction

Linux Kernel

- Android is built on the Linux kernel, but Android is not Linux
- No native windowing system
- No glibc support
- Does not include the full set of standard Linux utilities

LINUX KERNEL

Display Driver

Camera Driver

Bluetooth Driver

Shared Memory
Driver

Binder (IPC) Driver

USB Driver

Keypad Driver

Audio
Drivers

Power
Management

Linux Kernel

- Standard Linux 2.6.24 Kernel
- Patch of “kernel enhancements” to support Android

LINUX KERNEL

Display Driver

Camera Driver

Bluetooth Driver

Shared Memory
Driver

Binder (IPC) Driver

USB Driver

Keypad Driver

WiFi Driver

Audio
Drivers

Power
Management

Why Linux Kernel?

- Great memory and process management
- Permissions-based security model
- Proven driver model
- Support for shared libraries
- It's already open source!

LINUX KERNEL

ANDROID

Kernel Enhancements

- Alarm
- Ashmem
- Binder
- Power Management
- Low Memory Killer
- Kernel Debugger
- Logger

LINUX KERNEL

Management

ANDROID

Binder: Problem

- Applications and Services may run in separate processes but must communicate and share data
- IPC can introduce significant processing overhead and security holes

LINUX KERNEL

Display Driver

Camera Driver

Bluetooth Driver

Shared Memory
Driver

Binder (IPC) Driver

USB Driver

Keypad Driver

WiFi Driver

Audio
Drivers

Power
Management

Binder: Solution

- Driver to facilitate inter-process communication (IPC)
- High performance through shared memory
- Per-process thread pool for processing requests
- Reference counting, and mapping of object references across processes
- Synchronous calls between processes

Android Interface Definition Language (AIDL)

- <http://code.google.com/android/reference/aidl.html>

PM Problem

- Mobile devices run on battery power
- Batteries have limited capacity

LINUX KERNEL

Display Driver

Camera Driver

Bluetooth Driver

Shared Memory
Driver

Binder (IPC) Driver

USB Driver

Keypad Driver

WiFi Driver

Audio
Drivers

Power
Management

PM Solution

- Built on top of standard Linux Power Management (PM)
- More aggressive power management policy
- Components make requests to keep the power on through “*wake locks*”
- Supports different types of wake locks

ANDROID

What is Bionic?

- What is bionic?
 - Custom libc implementation, optimized for embedded use.

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

ANDROID

Why Bionic?

Why build a custom libc library?

- License: we want to keep GPL out of user-space
- Size: will load in each process, so it needs to be small
- Fast: limited CPU power means we need to be fast

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

ANDROID

Bionic libc

- BSD License
- Small size and fast code paths
- Very fast and small custom pthread implementation

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

ANDROID

Bionic libc

- Built-in support for important Android-specific services

- system properties

```
getprop("my.system.property", buff, default);
```

- log capabilities

```
LOGI("Logging a message with priority 'Info'");
```

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

Bionic libc

- Doesn't support certain POSIX features
- Not compatible with Gnu Libc (glibc)
- All native code must be compiled against bionic

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

Native Libraries

- Bionic Libc
- Function Libraries
- Native Servers
- Hardware Abstraction Libraries

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

ANDROID

WebKit

- Based on open source WebKit browser: <http://webkit.org>
- Renders pages in full (desktop) view
- Full CSS, Javascript, DOM, AJAX support
- Support for single-column and adaptive view rendering

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

Media Framework

- Based on PacketVideo OpenCORE platform
- Supports standard video, audio, still-frame formats
- Support for hardware / software codec plug-ins

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

FreeType

SSL

...

SQLite

- Light-weight transactional data store
- Back end for most platform data storage

Native Libraries

- Bionic Libc
- Function Libraries
- Native Servers
- Hardware Abstraction Libraries

LIBRARIES

Surface Manager

Media Framework

SQLite

WebKit

Libc

OpenGL|ES

Audio Manager

ANDROID

Surface Flinger

- Provides system-wide surface “composer”, handling all surface rendering to frame buffer device
- Can combine 2D and 3D surfaces and surfaces from multiple applications

Surface Flinger

- Surfaces passed as buffers via Binder IPC calls
- Can use OpenGL ES and 2D hardware accelerator for its compositions
- Double-buffering using page-flip

Audio Flinger

- Manages all audio output devices
- Processes multiple audio streams into PCM audio out paths
- Handles audio routing to various outputs

Native Libraries

- Bionic Libc
- Function Libraries
- Native Servers
- Hardware Abstraction Libraries

LIBRARIES

Hardware Abstraction Layer

APPLICATIONS

APPLICATION FRAMEWORK

LIBRARIES

ANDROID RUNTIME

HARDWARE ABSTRACTION LAYER

LINUX KERNEL

Hardware Abstraction Libraries

- User space C/C++ library layer
- Defines the interface that Android requires hardware “drivers” to implement
- Separates the Android platform logic from the hardware interface

HARDWARE ABSTRACTION LAYER

Graphics

Audio

Camera

Bluetooth

GPS

Radio (RIL)

WiFi

...

Hardware Abstraction Libraries

Why do we need a user-space HAL?

- Not all components have standardized kernel driver interfaces
- Kernel drivers are GPL which exposes any proprietary IP
- Android has specific requirements for hardware drivers

HARDWARE ABSTRACTION LAYER

Graphics

Audio

Camera

Bluetooth

GPS

Radio (RIL)

WiFi

...

HAL Header Example

```
// must be provided by each Acme hardware implementation
```

```
typedef struct {
```

```
    int    (*foo)( void );
```

```
    char  (*bar)( void );
```

```
    ...
```

```
} AcmeFunctions;
```

```
const AcmeFunctions *Acme_Init(const struct Env *env, int argc, char  
    **argv);
```

HARDWARE ABSTRACTION LAYER

Graphics

Audio

Camera

Bluetooth

GPS

Radio (RIL)

WiFi

...

ANDROID

Hardware Abstraction Libraries

- Libraries are loaded dynamically at runtime as needed

```
dlHandle = dlopen("/system/lib/libacme.so", RTLD_NOW);
```

```
...
```

```
acmeInit = (const AcmeFunctions (*)(const struct Env *,  
    int, char **))dlsym(dlHandle, "Acme_Init");
```

```
...
```

```
acmeFuncs = acmeInit(&env, argc, argv);
```

Dalvik Virtual Machine

- Android's custom clean-room implementation virtual machine
 - Provides application portability and runtime consistency
 - Runs optimized file format (.dex) and Dalvik bytecode
 - Java .class / .jar files converted to .dex at build time

Dalvik Virtual Machine

- Designed for embedded environment
 - Supports multiple virtual machine processes per device
 - Highly CPU-optimized bytecode interpreter
 - Uses runtime memory very efficiently

Core Libraries

- Core APIs for Java language provide a powerful, yet simple and familiar development platform
 - Data structures
 - Utilities
 - File access
 - Network Access
 - Graphics
 - ...

Agenda

- Android Anatomy
 - Linux Kernel
 - Native Libraries
 - Application Framework
- Android Physiology
 - Start-up Walkthrough
 - Layer Interaction

Runtime Walkthrough

It all starts with init...

Similar to most Linux-based systems at startup, the bootloader loads the Linux kernel and starts the init process.

Runtime Walkthrough

Init starts Linux daemons, including:

- USB Daemon (usbd) to manage USB connections
- Android Debug Bridge (adb) to manage ADB connections
- Debugger Daemon (debuggerd) to manage debug processes requests (dump memory, etc.)
- Radio Interface Layer Daemon (rild) to manage communication with the radio

Runtime Walkthrough

Init process starts the zygote process:

- A nascent process which initializes a Dalvik VM instance
- Loads classes and listens on socket for requests to spawn VMs
- Forks on request to create VM instances for managed processes
- Copy-on-write to maximize re-use and minimize footprint

Runtime Walkthrough

Init starts runtime process:

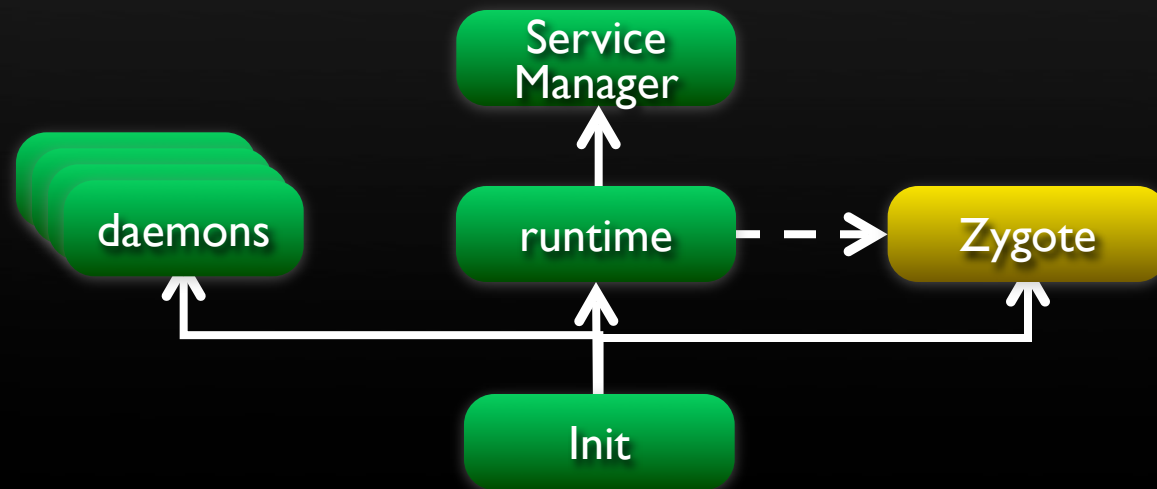

- Initializes Service Manager – the context manager for Binder that handles service registration and lookup
- Registers Service Manager as default context manager for Binder services

Runtime Walkthrough

Runtime process sends request for Zygote to start System Service

Runtime Walkthrough

Runtime process sends request for Zygote to start System Server

- Zygote forks a new VM instance for the System Service process and starts the service

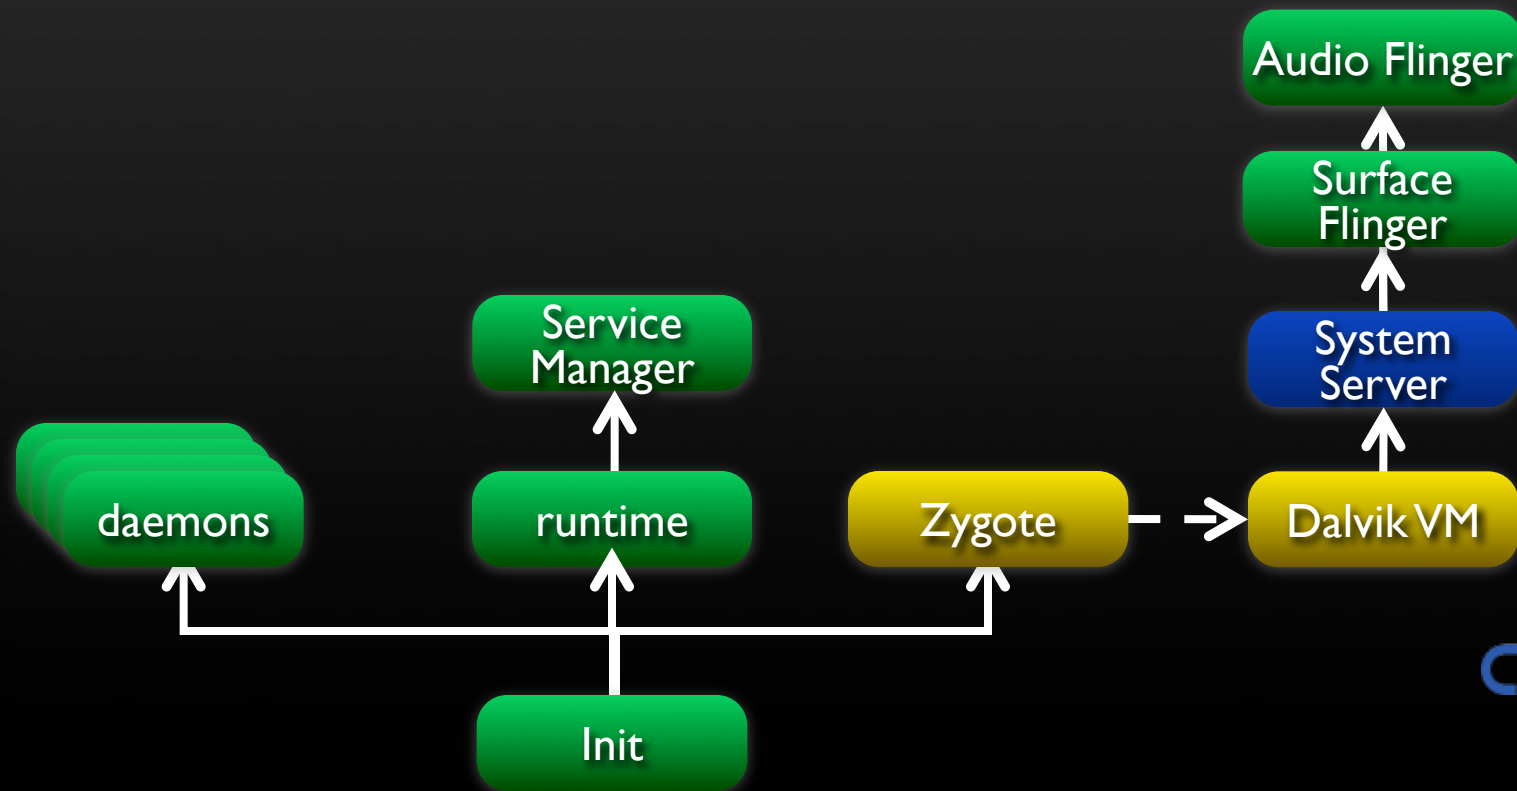

Runtime Walkthrough

System Service starts the native system servers, including:

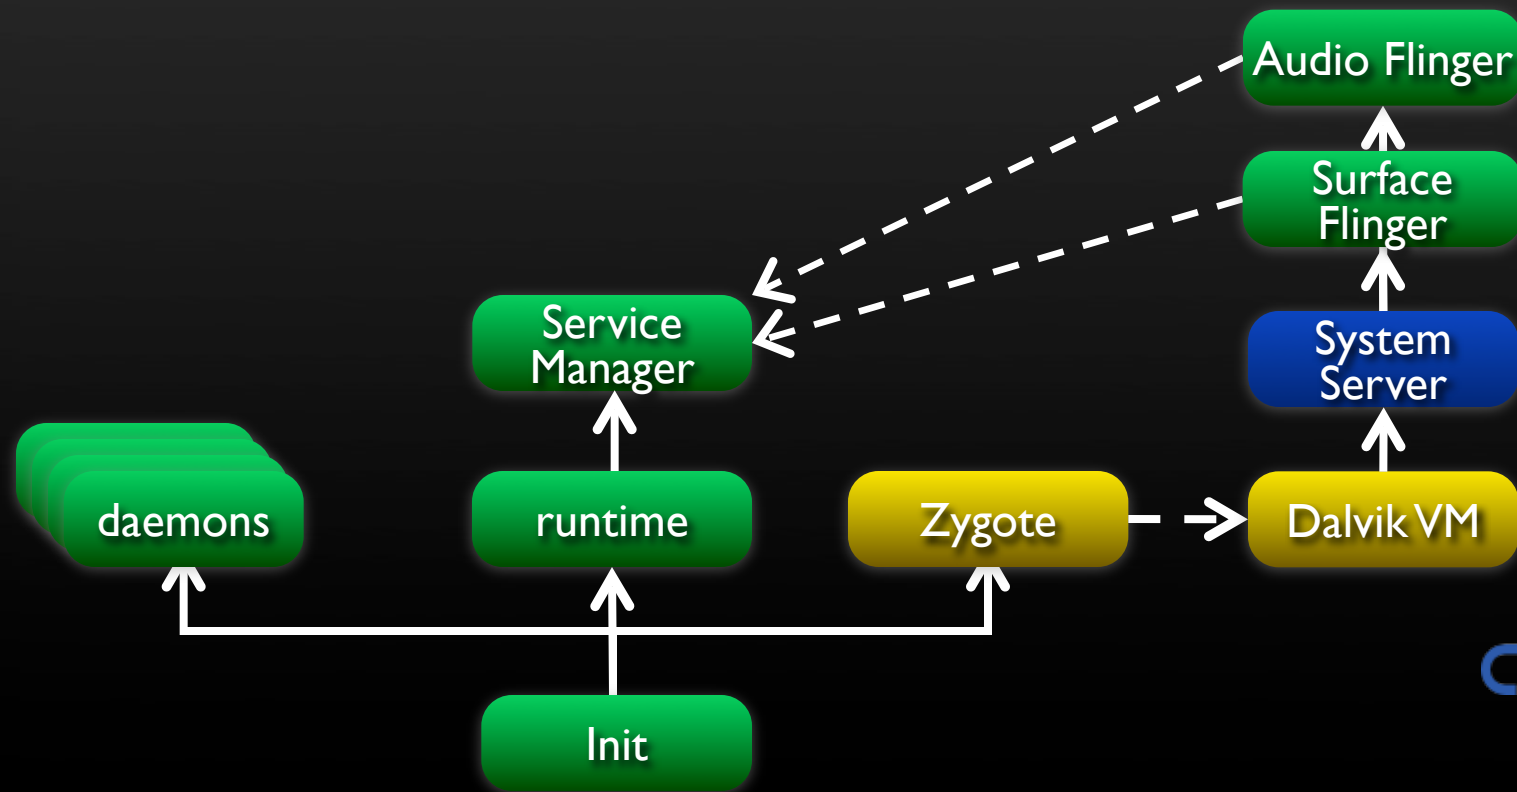

- Surface Flinger
- Audio Flinger

Runtime Walkthrough

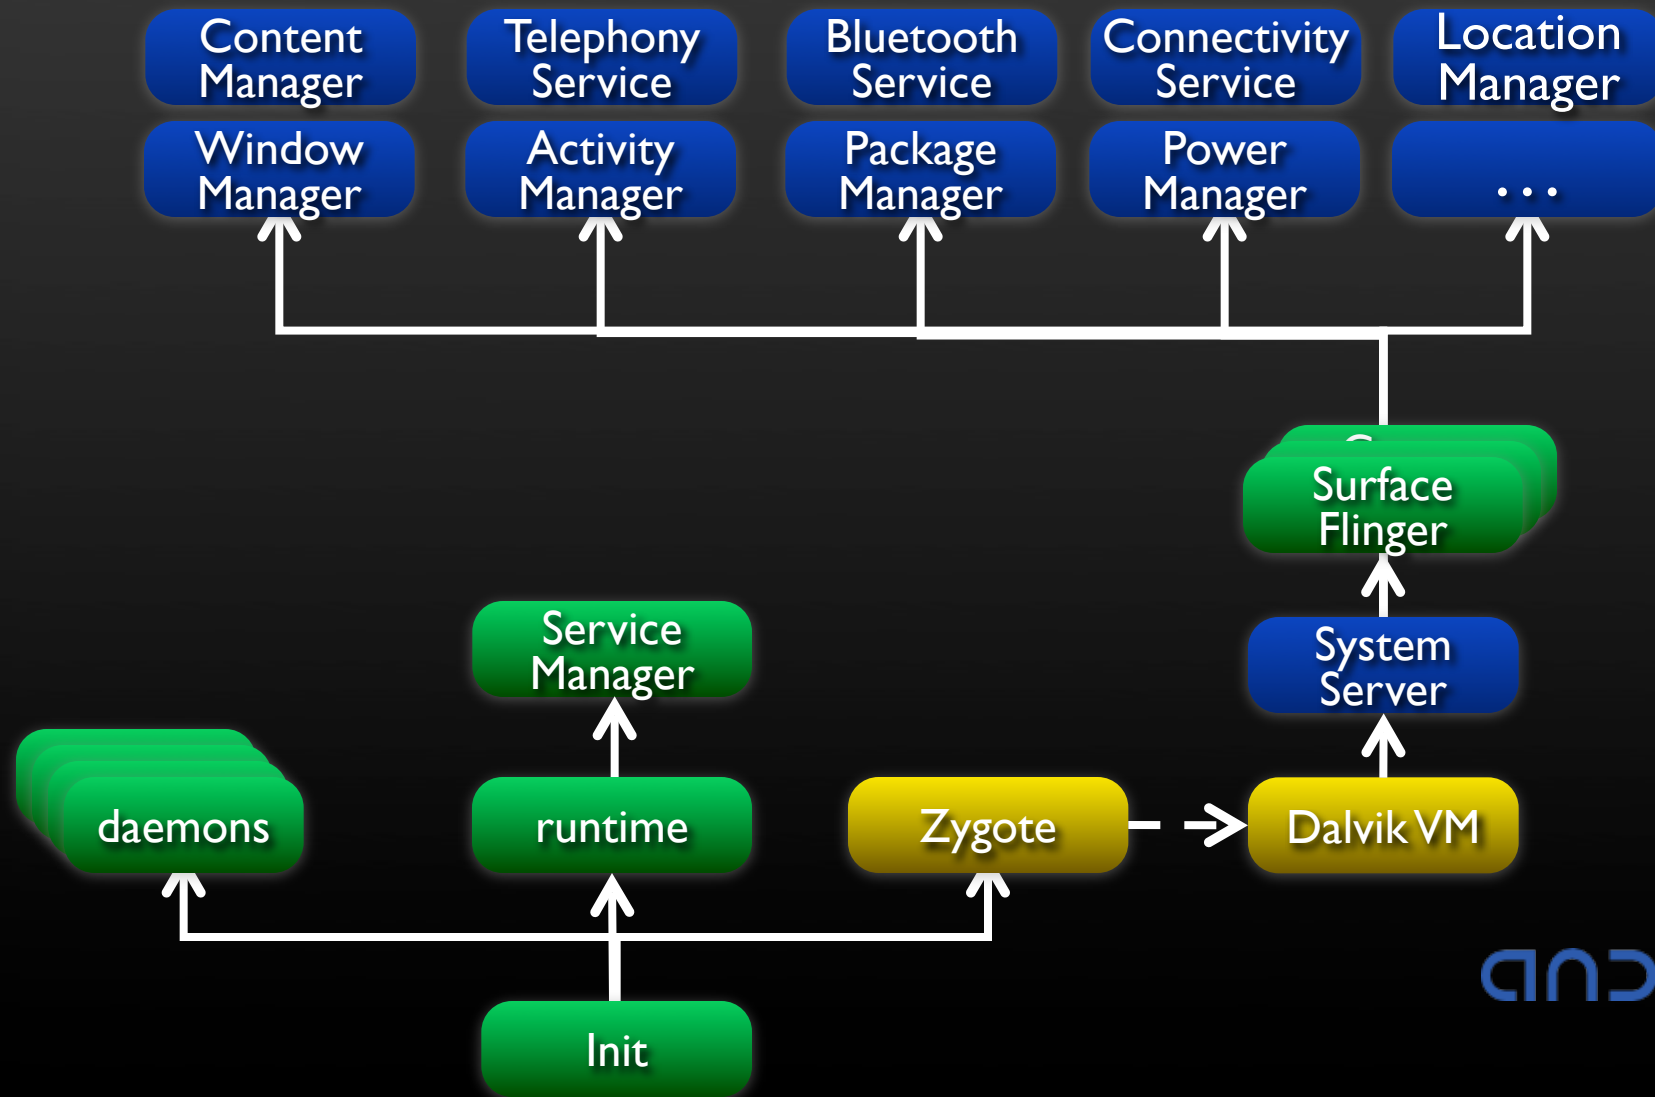

Native system servers register with Service Manager as IPC service targets:

Runtime Walkthrough

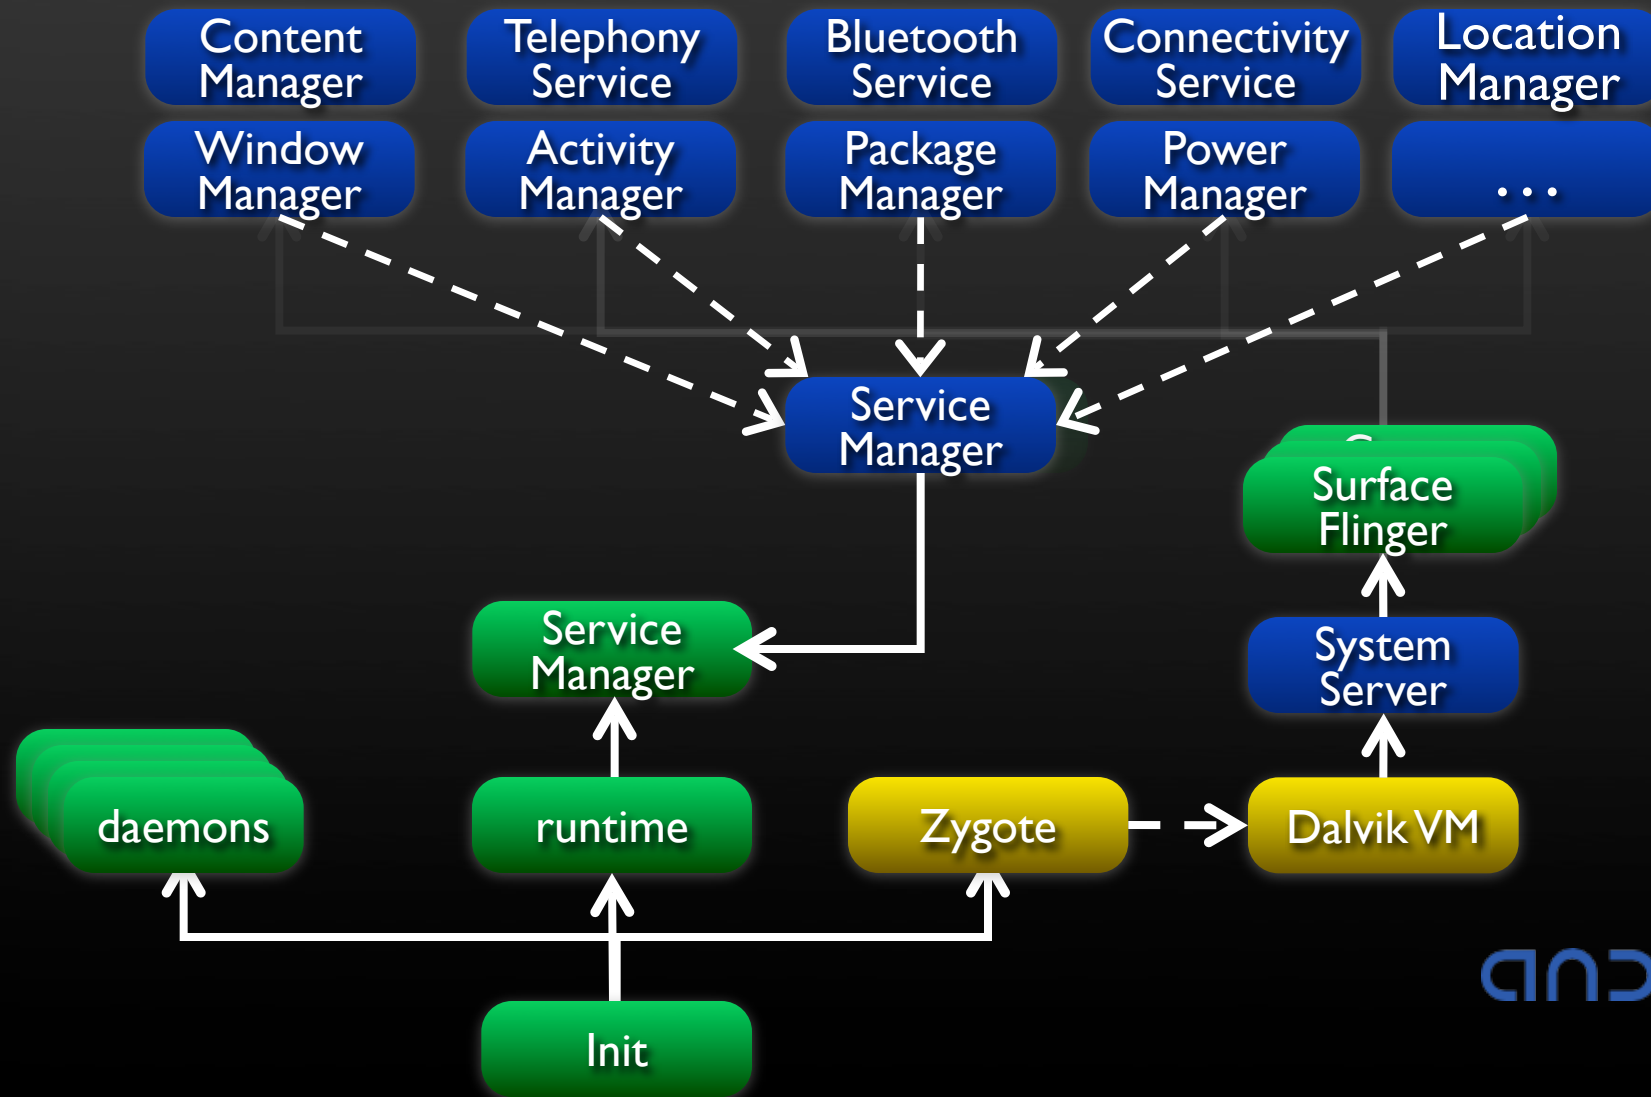

System Service starts the Android managed services:

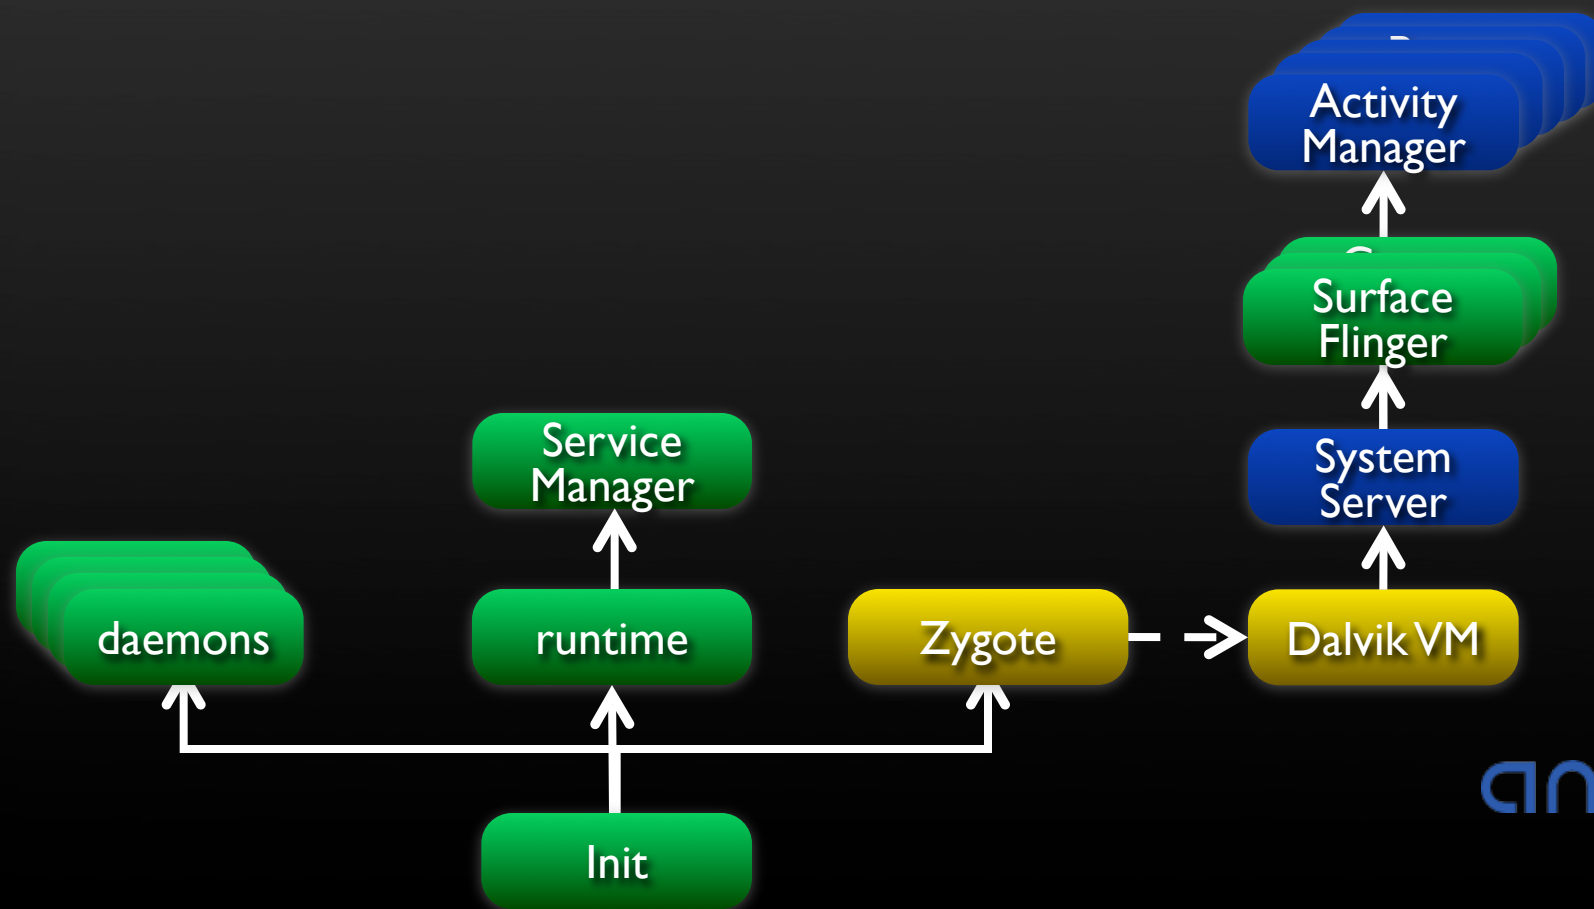

Runtime Walkthrough
