honesty in academic work
Section 1
What is plagiarism
Plagiarism is the act of using the work of others (in particular the writing of others) as one's own.

The most obvious and substantial type of plagiarism is copying whole articles, sections, paragraphs or whole sentences from other publications without acknowledgement. This is clearly unacceptable.

However, even the use of a few words or paraphrasing (without actually copying any words at all) may constitute plagiarism if the source is not acknowledged. Students sometimes unintentionally plagiarize because they are not aware of the very stringent rules that apply. Students must read the guidelines provided.

If material is taken from a source, there shall be proper quotes and acknowledgements.

My parents impressed on me the values that you work hard for what you want in life; that your word is your bond and you do what you say and keep your promise; that you treat people with respect.

Melania, 2016
And Barack and I were raised with so many of the same values: that you work hard for what you want in life; that your word is your bond and you do what you say you're going to do; that you treat people with dignity and respect, even if you don't know them, and even if you don't agree with them.

Michelle, 2008

My parents impressed on me the values that you work hard for what you want in life; that your word is your bond and you do what you say and keep your promise; that you treat people with respect.

Melania, 2016
Q: Show that $4^{3/2} > 6$.

Suppose not, so $4^{3/2} \leq 6$. Then $(4^{3/2})^3 \leq 6^3$. But this is false because $(4^{3/2})^3 = 64 \cdot 8 = 256$, while $6^3 = 216$. 

name: Honey Bun
Q: Show that $4^{3/2} > 6$.

name: Honey Bun

Suppose not, so $4^{3/2} \leq 6$. Then $(4^{3/2})^3 \leq 6^3$. But this is false because $(4^{3/2})^3 = 64 \cdot 8 = 256$, while $6^3 = 216$.

name: Peter Pan

Suppose not, so $4^{3/2} \leq 6$. Then $(4^{3/2})^3 \leq 6^3$. But this is false because $(4^{3/2})^3 = 64 \cdot 8 = 256$, while $6^3 = 216$. 

Q: Show that $4^{\frac{3}{2}} > 6$.

name: Honey Bun

Suppose not, so $4^{\frac{3}{2}} \leq 6$. Then $(4^{\frac{3}{2}})^3 \leq 6^3$. But this is false because $(4^{\frac{3}{2}})^3 = 64 \cdot 8 = 256$, while $6^3 = 216$.

name: Peter Pan

Suppose not, so $4^{\frac{3}{2}} \leq 6$. Then $(4^{\frac{3}{2}})^3 \leq 6^3$. But this is false because $(4^{\frac{3}{2}})^3 = 64 \cdot 8 = 256$, while $6^3 = 216$.

plagiarism
Q: Show that \(4^{3/2} > 6\).

name: Honey Bun

Suppose not, so \(4^{3/2} \leq 6\). Then \((4^{3/2})^3 \leq 6^3\). But this is false because \((4^{3/2})^3 = 64 \cdot 8 = 256\), while \(6^3 = 216\).

I received help from Honey Bun.

Q: Show that \(4^{3/2} > 6\).

name: Honey Bun

Suppose not, so \(4^{3/2} \leq 6\). Then 
\[(4^{3/2})^3 \leq 6^3.\] But this is false because \((4^{3/2})^3 = 64 \cdot 8 = 256\), while \(6^3 = 216\).

name: Peter Pan

Since 
\[(4^{3/2})^3 = 256 > 216 = 6^3,\] by taking cube roots we get that 
\(4^{3/2} > 6\).

I received help from Honey Bun.
Q: Show that $4^{3/2} > 6$.

**name: Honey Bun**

Suppose not, so $4^{3/2} \leq 6$. Then $(4^{3/2})^3 \leq 6^3$. But this is false because $(4^{3/2})^3 = 64 \cdot 8 = 256$, while $6^3 = 216$.

**name: Peter Pan**

Since $(4^{3/2})^3 = 256 > 216 = 6^3$, by taking cube roots we get that $4^{3/2} > 6$.

I received help from Honey Bun.

Understand and write in own words!
