Automatic Question Answering (AQA)

Automatic **Factual** Question Answering (AFQA)

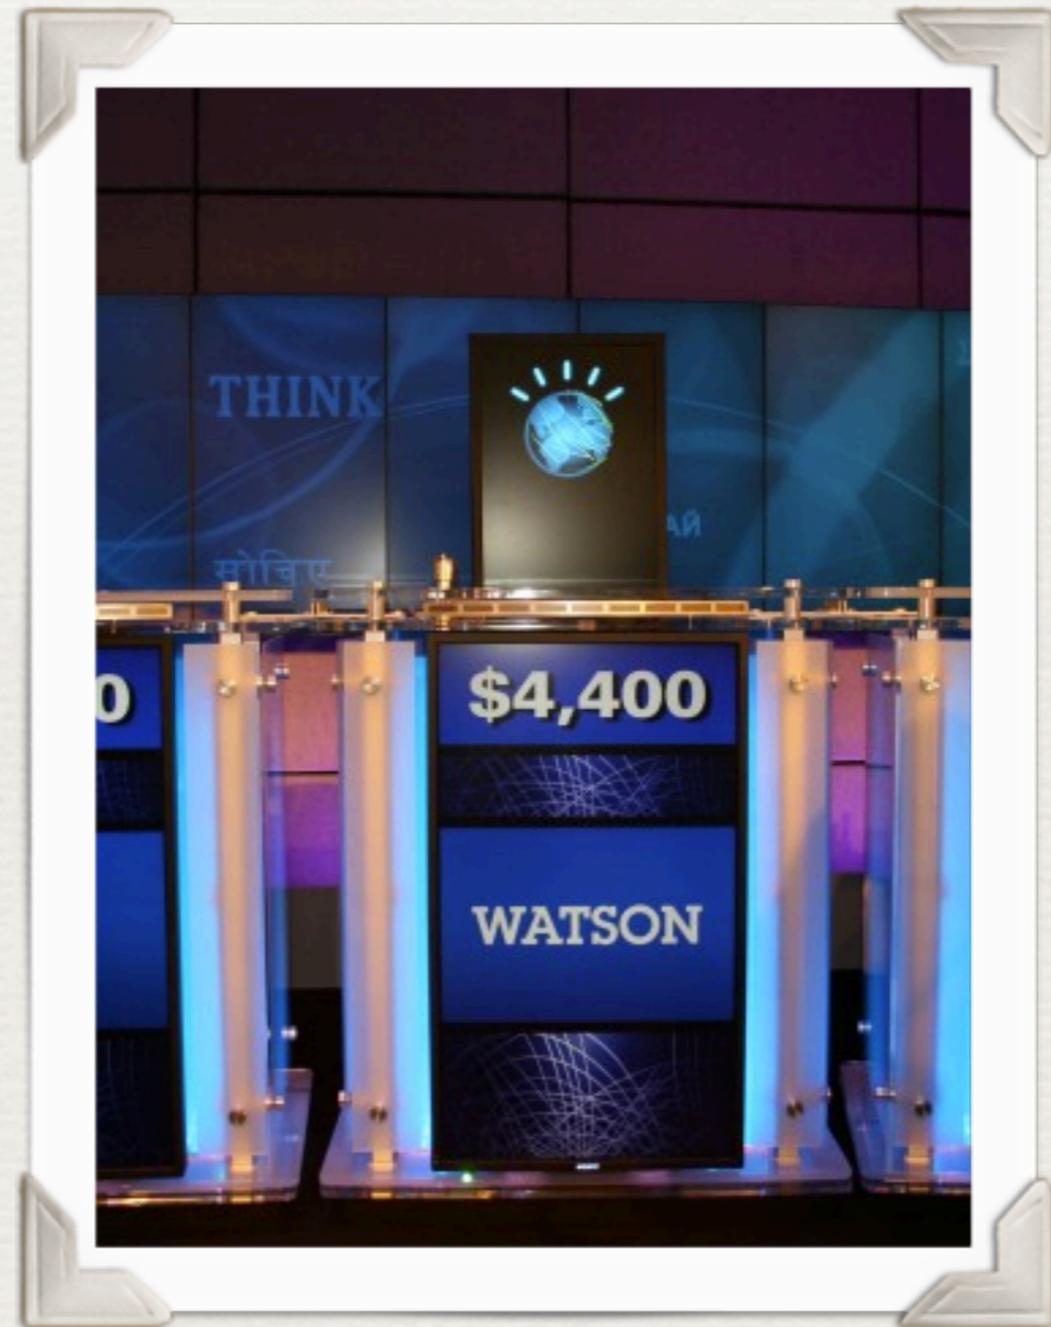

Automatic **Subjective** Question Answering (ASQA)

Automatic Factual Question Answering

- ♦ AFQA
 - ♦ Fact, a fixed answer
 - ♦ Compute from fact resources, e.g. Wikipedia
 - ♦ Harabagiu et al. 2001, Demner-Fushman and Lin 2007

Automatic Factual Question Answering

- ♦ AFQA
 - ♦ **F**act, a **f**ixed answer
 - ♦ Compute from **f**act **r**esources, e.g. Wikipedia
 - ♦ Harabagiu et al. 2001, Demner-Fushman and Lin 2007
- ♦ IBM Watson
 - ♦ Win **J**eopardy! Challenge
 - ♦ **Q**: He was president during the War of 1812.
 - ♦ **A**: Who is James Madison?

Automatic Subjective Question Answering

 - ◆ Opinions
 - ◆ Summarized answer,
different perspectives
 - ◆ Soricut and Brill 2004,
Li et al. 2008

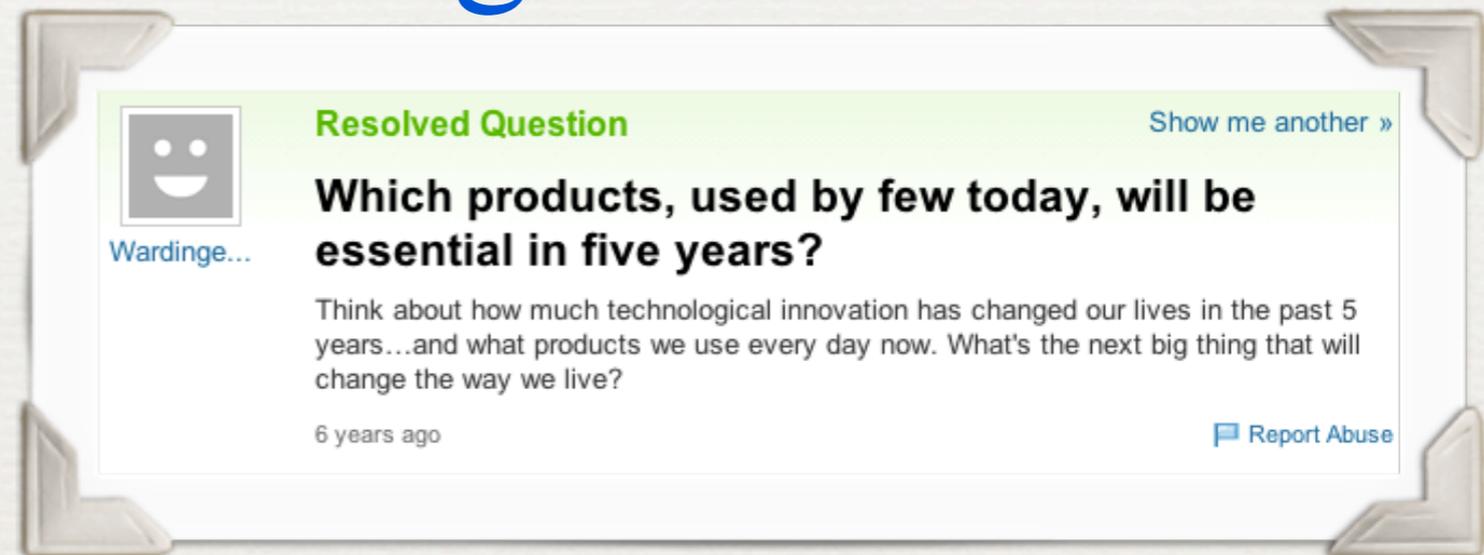

Automatic Subjective Question Answering

- ◆ ASQA

- ◆ Opinions

- ◆ Summarized answer,
different perspectives

- ◆ Soricut and Brill 2004,
Li et al. 2008

The screenshot shows a 'Resolved Question' interface. At the top, it says 'Resolved Question' in green, with a 'Show me another »' link to the right. On the left, there is a user profile icon (a smiley face) and the name 'Wardinge...'. The question text is 'Which products, used by few today, will be essential in five years?'. Below the question, there is a paragraph: 'Think about how much technological innovation has changed our lives in the past 5 years...and what products we use every day now. What's the next big thing that will change the way we live?'. At the bottom left, it says '6 years ago', and at the bottom right, there is a 'Report Abuse' link.

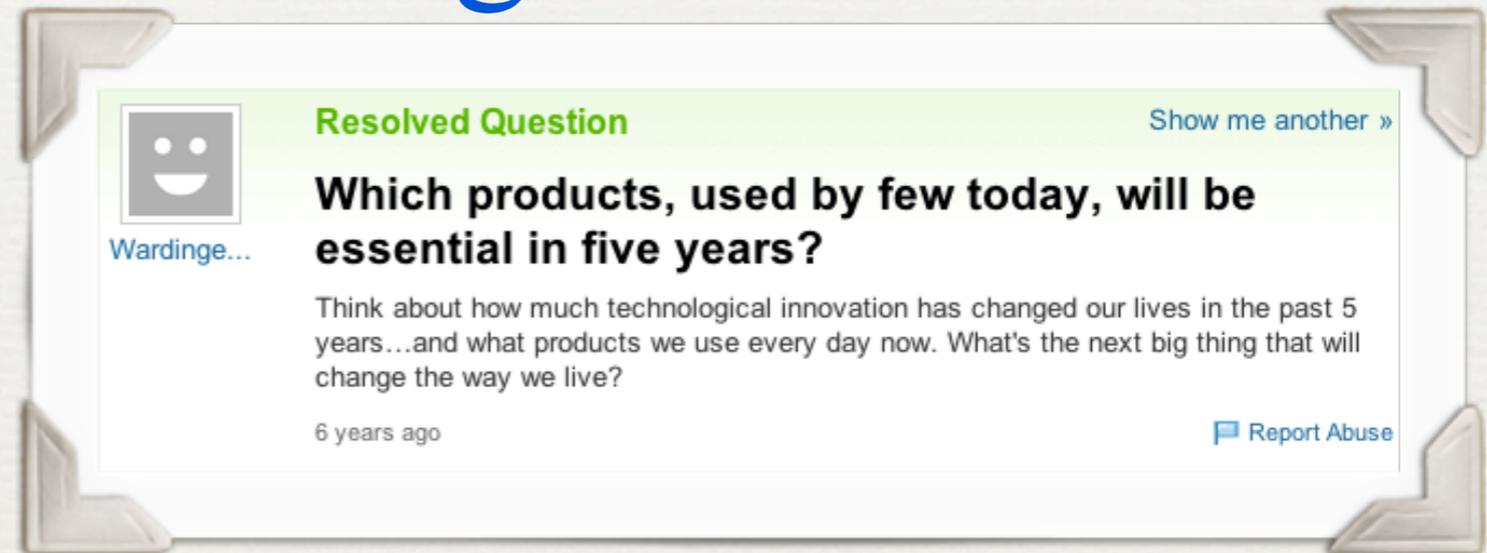

Automatic Subjective Question Answering

More challenge!

Outline

- ♦ Motivation
- ♦ Social Signal
- ♦ Feature
- ♦ Experiments
- ♦ Related Work
- ♦ Conclusions && Future Work

Motivation

- ♦ Alternative to *ASQA*?

Motivation

- ♦ Alternative to **ASQA**?
- ♦ **Yes!** Community Question Answering (CQA)
 - ♦ Platform
 - ♦ Post questions
 - ♦ Answer question
 - ♦ Give feedbacks

The logo for Yahoo! Answers, featuring the word "YAHOO!" in purple and "ANSWERS" in black.The logo for Answers.com, with "Answers." in blue and ".com" in green.The logo for Quora, with the word "Quora" in white on a red rectangular background.The logo for Google's "tanya jawab beta" service, with the word "Google" in its multi-colored font and "tanya jawab beta" in blue below it.The logo for Stack Overflow, featuring a stylized orange and yellow icon of a stack of books and the word "stackoverflow" in black.The logo for Answerbag, with a blue question mark icon and the text "answerbag" in white on a blue background, with the tagline "Every Question Deserves a Great Answer" below it.

Challenge

- ♦ Challenge of using CQA for question analysis
 - ♦ Ill-phrased, vague and complex
 - ♦ Lack of labeled data

“Web-scale learning is to use available large-scale data rather than hoping for annotated data that isn’t available.”

--Alon Halevy, Peter Norvig
and Fernando Pereira

Community Wisdom

Whether we can utilize **social signals** to
collect **training data** for question analysis
with **NO** manual labeling?

Motivation

- ◆ Question Subjectivity Identification (QSI)
 - ◆ A test case

Motivation

- ◆ Question Subjectivity Identification (QSI)
 - ◆ A **test case**
- ◆ Subjective Question
 - ◆ One or more **subjective answers**

Motivation

- ◆ Question Subjectivity Identification (QSI)
 - ◆ A **test case**
- ◆ Subjective Question
 - ◆ One or more **subjective answers**
- ◆ Objective Question
 - ◆ **Authoritative answer**, common knowledge or universal truth

Examples

◆ Subjective

- ◆ Does anyone remember a book called the “Robe” by Lloyd C. Douglas? What did you think of it?
- ◆ What was your favorite novel that you read?
- ◆ What are the ways to calm myself when flying?

◆ Objective

- ◆ When and how did Tom Thompson die? He is one of the group of Seven.
- ◆ What makes the color blue?
- ◆ Was Roy Orbison blind?

Why Perform QSI?

- ♦ More accurately **identify similar questions**
- ♦ Better **rank or filter** the answers
- ♦ Crucial component of **inferring user intent**
- ♦ Subjective question --> **Route to users**
- ♦ Objective question --> **Trigger AFQA**

Social Signal

- ◆ QSI
 - ◆ **Classification** task
 - ◆ Subjective question: **positive**
 - ◆ Objective question: **negative**

Social Signal

- ◆ Like: **like** an answer if they find the answer **useful**

👍 10 people rated this as good

👍 Like (2 people like this.)

👍 270

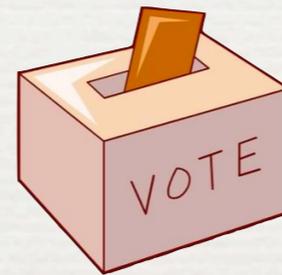

Social Signal

- ◆ Like: **like** an answer if they find the answer **useful**
- ◆ Intuition
 - ◆ Subjective
 - ◆ Answers are **opinions**, **different** tastes
 - ◆ Best answer receives **similar number of likes** with other answers
 - ◆ Objective
 - ◆ Like an answer which explains **universal truth** in the **most detail**
 - ◆ Best answer receives **higher likes** than other answers

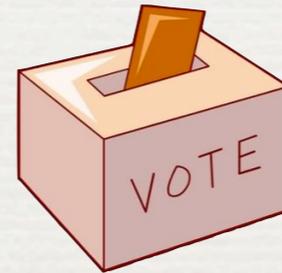

Social Signal

- ♦ Vote: users could vote for **best answer**

Social Signal

- ◆ Vote: users could vote for **best answer**
- ◆ Intuition
 - ◆ Subjective
 - ◆ Vote for different answers, **support** different **opinions**
 - ◆ **Low percentage** of votes on best answer
 - ◆ Objective
 - ◆ Easy to identify answer contains the **most fact**
 - ◆ Percentage of votes of best answer is **high**

Social Signal

- ◆ Source: **references** to **authoritative** resources
- ◆ Intuition
 - ◆ **Only** available for **objective** question that has **fact** answer

- ♦ **Post opinions** even they notice there are **other answers**

- ♦ Objective

- ♦ **May not post** answers to questions that have M received other answers since an **expected** answer is usually **fixed**

- ♦ A **large answer number** indicate **subjectivity**

- ♦ **HOWEVER**, a **small** answer number may be due to many reasons, such as **objectivity**, small **page views**

Summary of Social Signals

Name	Description	Training Data
Like	Capture users' tastes	Positive && Negative
Vote	Reflect users' judgments	Positive && Negative
Source	Measure confidence on authoritativeness	Negative
Poll and Survey	Indicate users' intent	Positive
Answer Number	Imply users' willingness to answer a question	Positive

Feature

- ◆ Word
 - ◆ **Effective** in many question answering applications
 - ◆ Each word is represented with **term frequency** (tf)

Feature

- ◆ Word
 - ◆ **Effective** in many question answering applications
 - ◆ Each word is represented with **term frequency** (tf)
- ◆ Word n-gram
 - ◆ Li et al. 2008 (**supervised**), Li, Liu and Agichtein 2008 (**semi-supervised**) observe the performance **gain** of word n-gram compared with word **is not large**
 - ◆ May be due to **sparsity** of their **small amount** of training data
 - ◆ Each word n-gram is represented with **term frequency**

Feature

- ◆ Question Length
 - ◆ Information needs of subjective questions are **complex**, users use **descriptions** to explain, Wang et al. 2010 ==> **larger question length**
 - ◆ Divide into **10 buckets**, corresponding bucket number is a feature

Feature

- ◆ Request Word
 - ◆ Particular words to explicitly indicate their **request** for seeking **opinions**
 - ◆ E.g. **Should** I buy the blackberry torch 9860 or the curve 9380 and why?
 - ◆ should, might, anyone, can, shall, may, would, could, please
 - ◆ **Total number** of request word as a feature

Feature

- ◆ Subjectivity Clue
 - ◆ **External** lexicon, Wilson et al. 2005, over 8000 clues
 - ◆ Manually compiled word list from **news** to express opinions

Feature

- ◆ Punctuation Density
 - ◆ Density of **punctuation marks**
 - ◆ Use **short sentence segments** when sharing their experiences

$$PDensity(Q) = \frac{\# \text{ punctuation marks}}{\# \text{ punctuation marks} + \# \text{ words}}$$

Feature

- ◆ Grammatical Modifier
 - ◆ Inspired by **opinion mining** research of using **grammatical modifiers** on judging users' **opinions**
 - ◆ **Adjective** and **adverb** are considered as grammatical modifiers

Feature

- ◆ Entity
 - ◆ Objective
 - ◆ Expect answer is fact, leading to **less relationships** among entities
 - ◆ Subjective
 - ◆ More descriptions, may involve relatively **complex relations**

Experiments

Experiments

- ♦ Comparison Methods
 - ♦ **Supervised learning** with manual labeling
 - ♦ CoCQA, **co-training**, state-of-the-art, Li, Liu and Agichtein 2008

Experiments

- ◆ Comparison Methods
 - ◆ **Supervised learning** with manual labeling
 - ◆ CoCQA, **co-training**, state-of-the-art, Li, Liu and Agichtein 2008
- ◆ Dataset
 - ◆ **Yahoo! Answers**, 4,375,429 questions with associated social signals
 - ◆ **Ground truth**: adapted from Li, Liu and Agichtein 2008

Experiments

- ◆ Comparison Methods
 - ◆ **Supervised learning** with manual labeling
 - ◆ CoCQA, **co-training**, state-of-the-art, Li, Liu and Agichtein 2008
- ◆ Dataset
 - ◆ **Yahoo! Answers**, 4,375,429 questions with associated social signals
 - ◆ **Ground truth**: adapted from Li, Liu and Agichtein 2008
- ◆ Classification Method
 - ◆ **Naive Bayes with add-one smoothing**, more effective than SVM
 - ◆ Parallelized using **MapReduce**

Experiments

Performance of word n-gram	
Method	Precision on Sub
Supervised	0.6596
CoCQA	0.6861 (+4.2%)
L+V+PS+AN+S	0.6626(+0.45%)
L	0.5714(-13.37%)
V+PS+AN+S	0.6981(+5.84%)

Experiments

- ✦ Better performance using word n-gram compared with word

Performance of Word and n-gram		
Method	Word	n-gram
Supervised	0.6380	0.6596 (+3.39%)
CoCQA	0.6432	0.6861 (+6.66%)
V+PS+AN	0.6707	0.7214 (+7.56%)
V+AN	0.6265	0.7201 (+14.94%)
AN+S	0.6157	0.7038 (+14.31%)

Experiments

Performance of Word and n-gram		
Method	Word	n-gram
Supervised	0.6380	0.6596 (+3.39%)
CoCQA	0.6432	0.6861 (+6.66%)
V+PS+AN	0.6707	0.7214 (+7.56%)
V+AN	0.6265	0.7201 (+14.94%)
AN+S	0.6157	0.7038 (+14.31%)

- ♦ **Better** performance using **word n-gram** compared with **word**
- ♦ **Social signals** achieve on average **12.27%** relative gain

Experiments

Performance of Word and n-gram		
Method	Word	n-gram
Supervised	0.6380	0.6596 (+3.39%)
CoCQA	0.6432	0.6861 (+6.66%)
V+PS+AN	0.6707	0.7214 (+7.56%)
V+AN	0.6265	0.7201 (+14.94%)
AN+S	0.6157	0.7038 (+14.31%)

- ✦ Better performance using **word n-gram** compared with **word**
- ✦ **Social signals** achieve on average **12.27%** relative gain
- ✦ **Supervised**, manually labeling, **sparsity**

Experiments

Performance of Word and n-gram		
Method	Word	n-gram
Supervised	0.6380	0.6596 (+3.39%)
CoCQA	0.6432	0.6861 (+6.66%)
V+PS+AN	0.6707	0.7214 (+7.56%)
V+AN	0.6265	0.7201 (+14.94%)
AN+S	0.6157	0.7038 (+14.31%)

- ✦ Better performance using **word n-gram** compared with **word**
- ✦ **Social signals** achieve on average **12.27%** relative gain
- ✦ **Supervised**, manually labeling, **sparsity**
- ✦ **CoCQA**, use several thousand unlabeled data, tackled sparsity **to some extent**

Experiments

Performance of Word and n-gram		
Method	Word	n-gram
Supervised	0.6380	0.6596 (+3.39%)
CoCQA	0.6432	0.6861 (+6.66%)
V+PS+AN	0.6707	0.7214 (+7.56%)
V+AN	0.6265	0.7201 (+14.94%)
AN+S	0.6157	0.7038 (+14.31%)

- ✦ Better performance using **word n-gram** compared with **word**
- ✦ **Social signals** achieve on average **12.27%** relative gain
- ✦ **Supervised**, manually labeling, **sparsity**
- ✦ **CoCQA**, use several thousand unlabeled data, tackled sparsity **to some extent**
- ✦ Training data collected by social signals, **large amount**, better solve data sparsity problem

Experiments

Performance of varying amount of training data				
Method	20%	40%	90%	100%
V+AN	0.6549	0.7004	0.7188	0.7201
AN+S	0.6550	0.6696	0.6842	0.7038
V+PS +AN	0.6640	0.6846	0.7037	0.7214

- ♦ Three best performing combinations of social signals
- ♦ **Increase** training data, performances **improve**

Experiments

Performance of Heuristic Features

	ngram	+qlength	+rword	+sclue	+pdensity	+gmodifier	+entity	heuristic features	+heuristic features
Precision	0.6596	0.6896	0.6834	0.6799	0.7000	0.6950	0.6801	0.6995	0.7337 (+11.23%)

- ◆ Adding any **heuristic feature** to word n-gram **improve precision**
- ◆ Combining heuristic feature and word n-gram achieves **11.23% relative gain** over n-gram

Conclusions && Future Work

- ◆ Conclusions
 - ◆ **Data-driven** approach for **QSI** by utilizing **social signals** in CQA with **NO** manual labeling
 - ◆ Study various **light-weight features** for QSI
 - ◆ Experiments indicate **effectiveness** of proposed approaches
- ◆ Future Work
 - ◆ Feature investigation: **semantic analysis** using NLP
 - ◆ **Characteristics** of subjective questions, whether we could find popular **semantic patterns** for subjective questions

Acknowledgement

- ♦ Thanks **AI Journal** and **Google** for sponsoring my **AAAI-12 Student Scholarship**
- ♦ The work described in this paper was fully supported by two grants from the **Research Grants Council of the Hong Kong Special Administrative Region, China** (Project No. **CUHK 413210** and **CUHK 415311**) and two grants from **Google Inc.** (one for **Focused Grant Project “mobile 2014”** and one for **Google Research Awards**)

Thanks!

Q & A

FAQ

- ♦ How to define subjective or objective questions?
 - ♦ Ground truth data was created using Amazon's Mechanical Turk service. Each question was judged by 5 qualified Mechanical Turk workers. Subjectivity was decided using majority voting

FAQ

- ♦ Formula of like social signal

- ♦ Positive $L(Q_{best_answer}) \leq \frac{\sum L(Q_{answer})}{AN(Q)}$

- ♦ $L()$ is number of people like this answer

- ♦ Q_{best_answer} is the best answer

- ♦ Q_{answer} is an answer of Q

- ♦ $AN()$ is the number of answers of a question

- ♦ Negative $L(Q_{best_answer}) \geq \alpha \times MAX(L(Q_{other_answer}))$

- ♦ α is a parameter

- ♦ Q_{other_answer} is an answer except the best answer

- ♦ $MAX()$ is the maximum function

FAQ

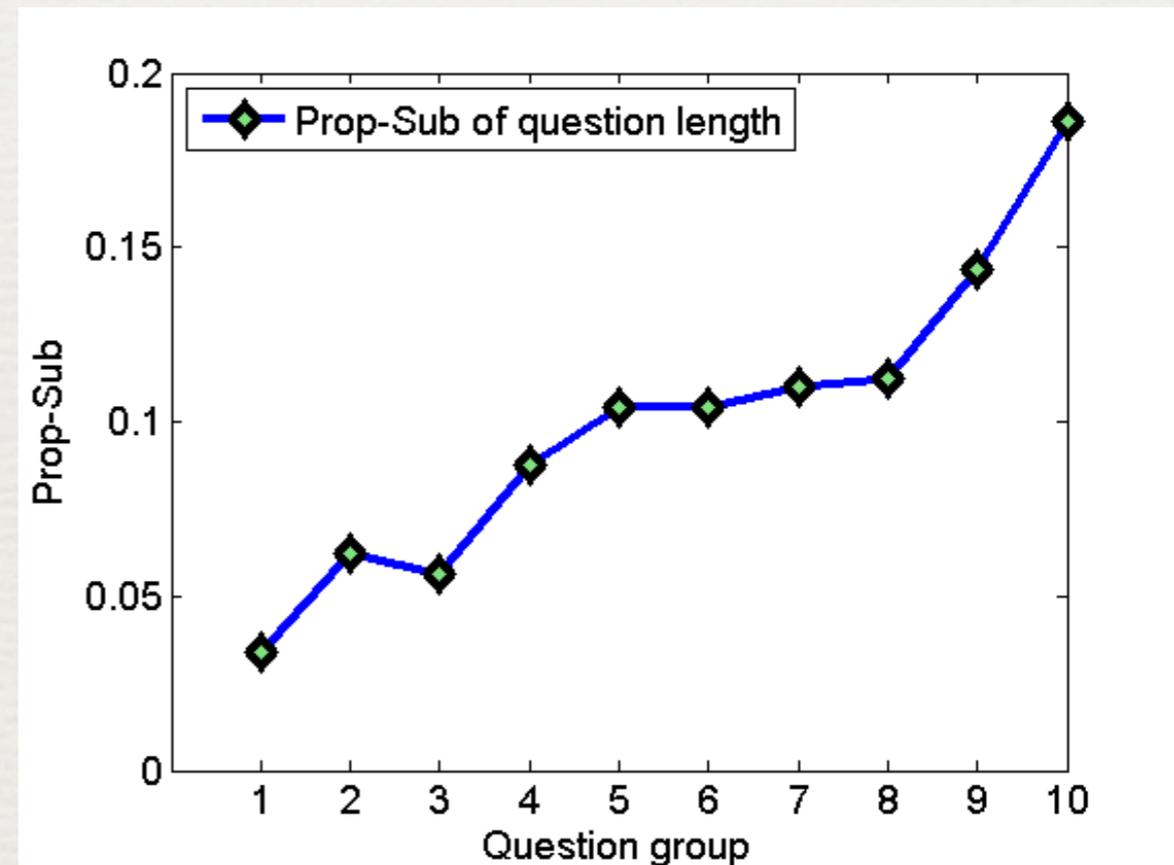

- ♦ Formula of vote social signal
 - ♦ Positive $V(Q_{best_answer}) \leq \beta$
 - ♦ $V()$ is the percentage of votes of an answer
 - ♦ β is a parameter
 - ♦ Negative $V(Q_{best_answer}) \geq \gamma$
 - ♦ γ is a parameter

FAQ

- ♦ Formula of answer number social signal
 - ♦ Positive $AN(Q) \geq \theta$
 - ♦ $AN()$ is the number of answers of a question
 - ♦ θ is a parameter

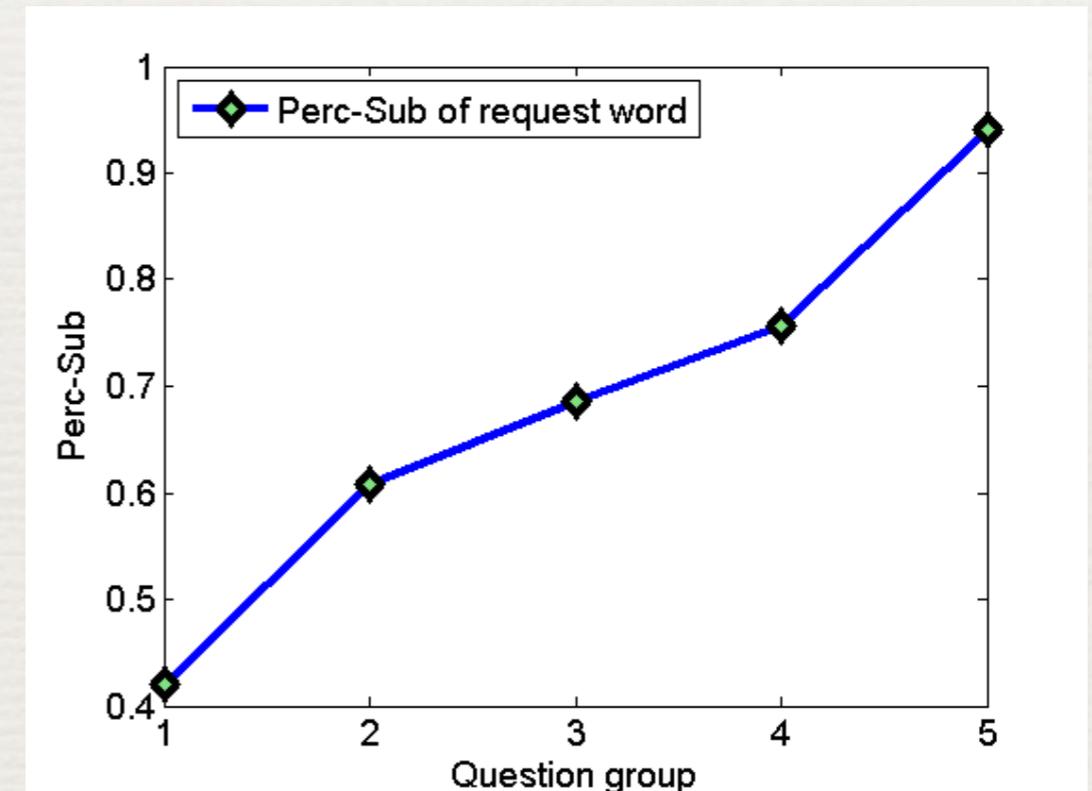

FAQ

- ◆ Proportion of subjective questions with respect to questions' lengths
- ◆ Objective question, express needs precisely
 - ◆ Which player has won the fa cup twice with 2 different teams?
- ◆ Subjective question, share his/her personal opinion together with the question
 - ◆ Has anyone read "Empire" by Orson Scott Card? This is scary. I especially liked the "Afterword" by him. Its amazing how close you can feel today to it coming true.

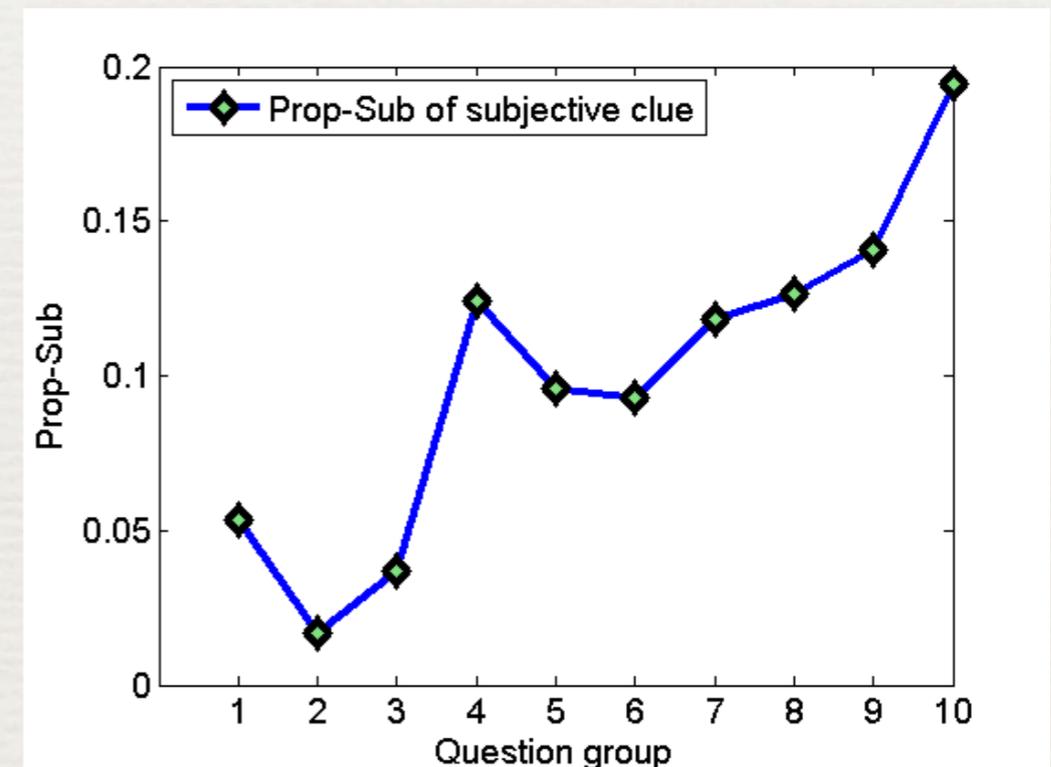

FAQ

- ◆ Group 1 contains questions that don't have any request word, groups 2 contains questions having 1 request word, group 3 contains 2 request words, group 4 contains 3 request words, and group 5 contains at least 4 request words
- ◆ Percentage of subjective questions among all questions in each group
- ◆ Subjective questions
 - ◆ Complicated background or detailed opinions
 - ◆ Question relatively long
 - ◆ Attract potential answerers

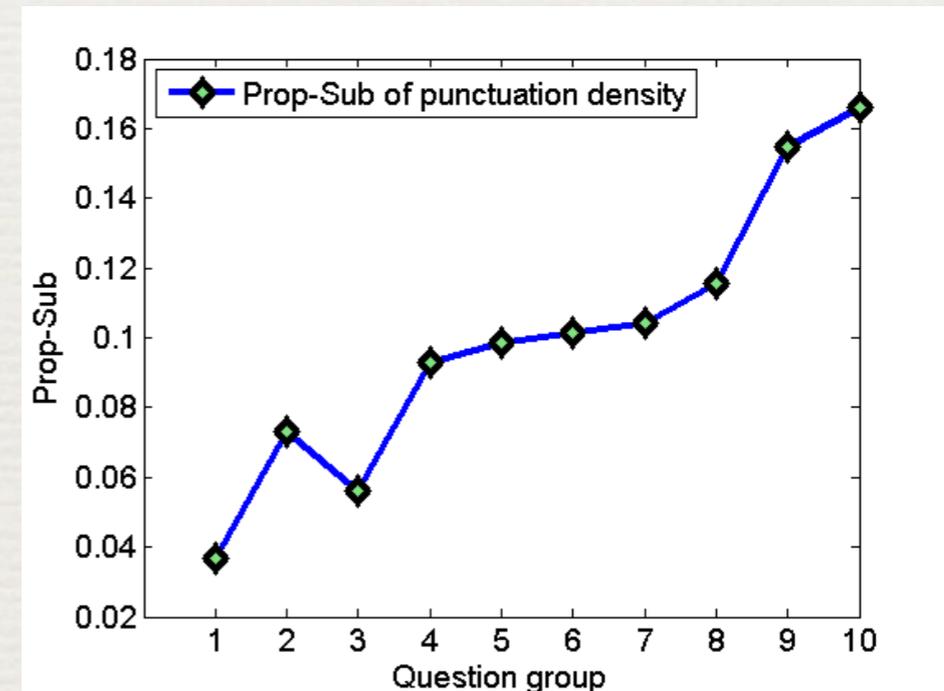

FAQ

- ◆ External lexicon still help distinguish between subjective and objective questions to some extent

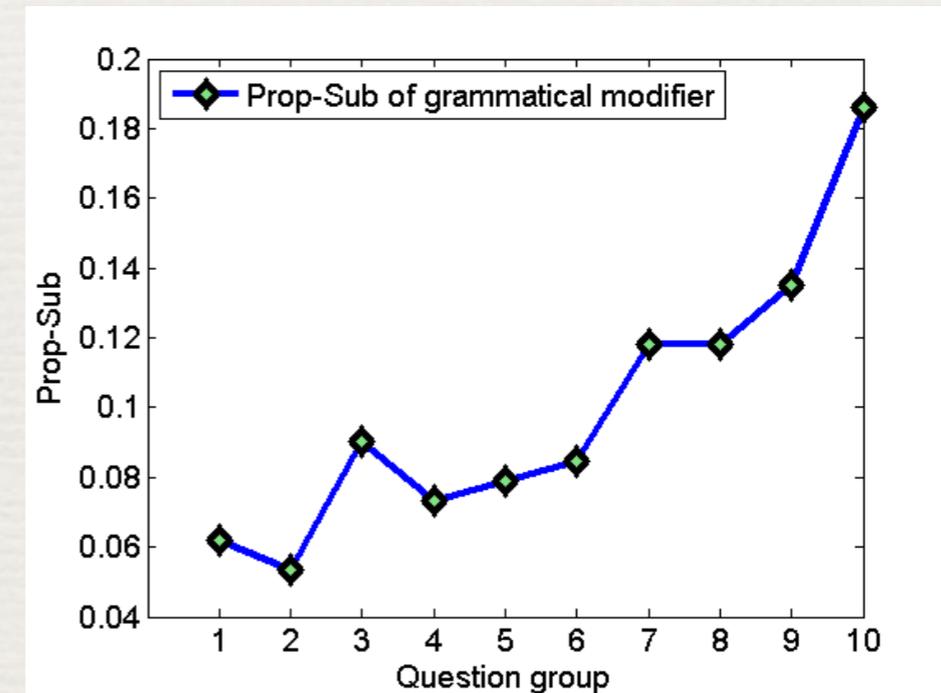

FAQ

- ◆ Punctuation mark density of subjective question is higher than that of objective questions
- ◆ Use short sentence segments when sharing their experiences in subjective questions
- ◆ Short sentences help better express users' feelings and opinions in asking subjective questions

FAQ

- ◆ Grammatical modifiers are commonly used to describe users' feelings, experiences, and opinions in subjective questions

FAQ

- ♦ Objective questions involve fewer entities
- ♦ Subjective questions involve more descriptions, which also contain entities
