Course ID: 013173  
Eff Date: 2023-07-01  
Crse Status: Active  
Apprv. Status: Approved

Foundation of Applied Deep Learning 應用深度學習基礎

This course covers how to use deep learning techniques to resolve real-life computational problems, handling different kinds of data. We start the course by introducing the problem-solving paradigm with deep learning: data preparation, building the model, training the model, model evaluation, and hyper-parameter searching. Then, we fill in the details in the paradigm. Regarding the deep learning models, we will go from the simplest linear regression model, towards the relatively complicated models. To handle various data types, that is, the structured data, images, text, sequences, signals, and graphs, in our daily life, we would cover CNN/ResNet, RNN/LSTM, Attention, and GNN models. In addition to the above paradigms, we will also cover the commonly used techniques to handle overfitting. We would briefly go through the generative models, VAE, and GAN, at the end of this course.

Grade Descriptor:

A

EXCELLENT - exceptionally good performance and far exceeding expectation in all or most of the course learning outcomes; demonstration of superior understanding of the subject matter, the ability to analyze problems and apply extensive knowledge, and skillful use of concepts and materials to derive proper solutions.

B

GOOD - good performance in all course learning outcomes and exceeding expectation in some of them; demonstration of good understanding of the subject matter and the ability to use proper concepts and materials to solve most of the problems encountered.

C

FAIR - adequate performance and meeting expectation in all course learning outcomes; demonstration of adequate understanding of the subject matter and the ability to solve simple problems.

有關等級說明的資料，請參閱英文版本。
D

MARGINAL - performance barely meets the expectation in the essential course learning outcomes; demonstration of partial understanding of the subject matter and the ability to solve simple problems.

F

FAILURE - performance does not meet the expectation in the essential course learning outcomes; demonstration of serious deficiencies and the need to retake the course.

COURSE OUTCOMES

Learning Outcomes:

At the end of the course of studies, students will have acquired the ability to

1. Understand the problem-solving paradigm with deep learning to resolve the real-life problems.
2. Grasp the basic concepts related to deep learning: a) the difference between different flavours of deep learning models and what kind of deep learning model to use when encountering a certain data type; b) how to train the deep learning models, understanding the difference between different deep learning optimizers; c) how to evaluate the deep learning models, judging whether the model is overfitting and handling the overfitting issue in deep learning; d) what the model hyper-parameters are and how to choose and tune the hyper-parameters.
3. Develop the programming techniques and build various deep learning models, including CNN/ResNet, RNN/LSTM, Attention, and GNN, with existing packages, such as Pytorch, to solve the real-life problems.
4. Communicate with others and present their work.

Course Syllabus:
This course covers how to use deep learning techniques to resolve real-life computational problems, handling different kinds of data. We start the course by introducing the problem-solving paradigm with deep learning: data preparation, building the model, training the model, model evaluation, and hyper-parameter searching. Then, we fill in the details in the paradigm. Regarding the deep learning models, we will go from the simplest linear regression model, towards the relatively complicated models. To handle various data types, that is, the structured data, images, text, sequences, signals, and graphs, in our daily life, we would cover CNN/ResNet, RNN/LSTM, Attention, and GNN models. In addition to the above paradigms, we will also cover the commonly used techniques to handle overfitting. We would briefly go through the generative models, VAE, and GAN, at the end of this course.

Assessment Type:

<table>
<thead>
<tr>
<th>Assessment Type</th>

</tr>
</thead>
<tbody>
<tr>
<td>Homework or assignment</td>
<td>50%</td>
</tr>
<tr>
<td>Lab reports</td>
<td>10%</td>
</tr>
<tr>
<td>Presentation</td>
<td>10%</td>
</tr>
<tr>
<td>Test or quiz</td>
<td>30%</td>
</tr>
</tbody>
</table>

Feedback for Evaluation:
1. Quiz and examinations
2. Course evaluation and questionnaire
3. Question-and-answer sessions during class
4. Student consultation during office hours or online
5. Reflection of the lecturer

Required Readings:

nil

## ENROLMENT REQUIREMENTS

1. AIST4010

**Enrollment Requirement Group:**
- Not for students who have taken ESTR4140
- Prerequisite: (CSCI3230 or CSCI3320) AND (AIST1110 or CSCI1040 or CSCI2040)

**New Enrollment Requirement(s):**
- Pre-requisite = changed from "(AIST1000 or CSCI3230 or CSCI3320) AND (AIST1110 or CSCI1040 or CSCI2040)"
  to "(CSCI3230 or CSCI3320) AND (AIST1110 or CSCI1040 or CSCI2040)"
- Exclusion = no change
